

Energoline[®] test lane and diagnostics software

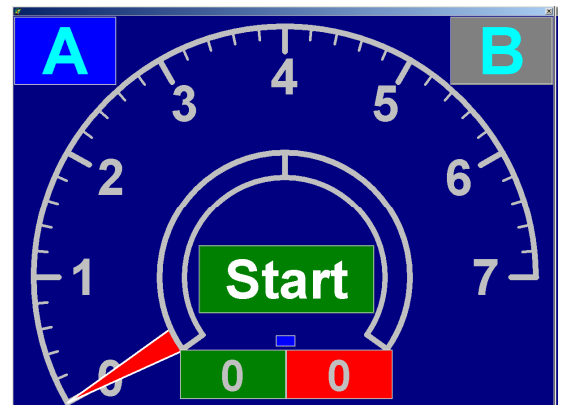

Computer based software system for diagnostics and periodical technical inspection of vehicles. The measurements are software controlled with user-friendly interface, the results are automatically processed, displayed (option) and stored. Energoline[®] is an open, integrated, customisable by parameters, complete and cost effective solution for technical inspection lanes and for diagnostics lanes with several special functions.

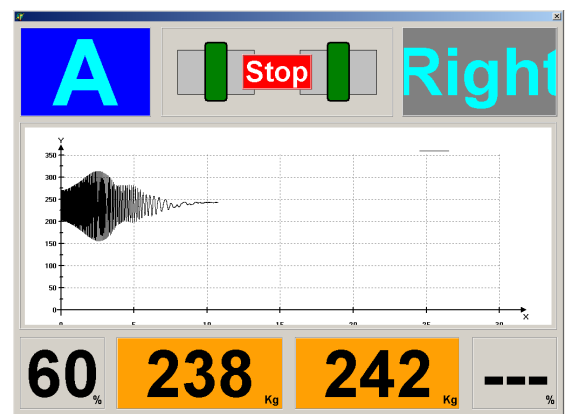

- Accepted by authority in Hungary and in other European countries
- Control of the measurements
- Communication with administrative software
- Storing and collecting the measurement results
- Automatic evaluation
- More than 1000 customisable parameters
- Standalone or computer network mode
- Interface for non-Energotest produced or sold equipment
- Continuous development
- Software update according to the regulations and customer demands

Information for installation possibilities

- Setup for data collection
- Setup of the measuring equipments
- Setup of the evaluation, qualification
- Setup of the operation (manual, semi-automatic, automatic modes)
- Setup of the print layouts

Energoline[®] brake measurement screen

Energoline[®] suspension measurement screen

Standard modules

Energoline® software package and measurement modules:

- Brake measurement
- Suspension examination
- Exhaust gas analyser and opacimeter module
- Handling subjective errors – module for visual inspection
- Tachograph control module

Accessory modules

- Axle load measurement
- Headlight tester module
- Sound level measurement
- Side slip measurement

Optional equipment to be connected, technologies

- Digital camera
- Touch screen solutions
- PDA display
- Wireless remote controller
- Wireless remote controller with pedal force meter
- Brake measurement of motorcycles
- Brake measurement of trailers with overrun brake system
- Inspection of 4WD vehicles
- Inspection of vehicles multiple axles (higher than 5 axles)

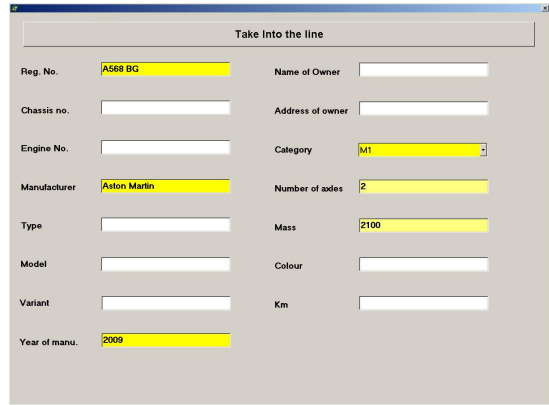

Technical data

Energoline® modules:

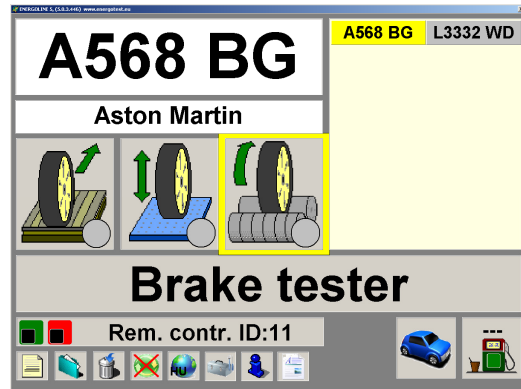

- Data input modules
- Modules for measurements
- Storing of data and results
- Evaluation, automatic qualification
- Printing
- Module for previous measurements
- Communication with other software (authority-, administrative and service software)
- Automatic operation
- Continuous error monitoring
- Continuous parameter archiving and restoring

Made in Hungary
